

ABOUT ME · CREATIVE DIRECTION

What an award-winning About page should do

40 sites · Awwwards, Webbys and CSSDA

Research, motion evidence and three concept frames

Build a living editorial
profile,
not a scrolling CV.

40 award-winning About pages point to one clear direction

Sample

Award-verified personal portfolios and small creative studios with substantive About, Profile or Studio pages.

40

sites

researched

13

pages at or

below 220 words

3

award

bodies

What the research had to answer

- 01 What does an About page need to say?
- 02 How long can it be?
- 03 How does confidence stay human?
- 04 Which interaction adds meaning?
- 05 How can side work feel purposeful?
- 06 What should beck.fyi do differently?

The shell is ready. The story is not.

Current state

About Me is an intentional placeholder inside a finished, stable shell. The opportunity is to turn scrolling into a concise professional story without changing the physical frame.

The best About pages position, prove and humanize.

The repeated pattern

The page earns attention by stating a useful position, earns trust through concrete evidence, and earns memory through one human point of view.

Position

What do I do now, for whom, and why does it matter?

Prove

Use clients, dates, outcomes and artifacts after the claim.

Humanize

Add one belief, fascination or detail that explains the work.

Most award-winning About pages are longer than one minute

Length finding

The median page is 354 words. The strongest one-minute references cluster around 150–220 words; clarity correlates with editing, not volume.

354

median

word count

13

pages at or

below 220 words

18

pages at or

below 300 words

Confidence works when evidence follows the claim

Research pattern

Bold statements land when the next beat names a decision, scope, collaborator, client or observable result.

Confident

“I led...” — then name the scope, client and consequence.

- Claim first
- Proof immediately after
- One clear point of view

Self-important

“I am world-class...” — with no observable evidence.

- Adjectives first
- Awards as the climax
- Generic values

Four useful narrative models appear again and again

No single model wins

The right answer for Alexander combines the edit of a calm ledger, the drama of kinetic type and the humanity of a personal cabinet.

Calm ledger

Concise role, proof and contact. Strong credibility; little emotion.

Kinetic statement

Oversized type turns one belief into an experience.

Personal cabinet

Artifacts reveal taste, curiosity and side work.

Studio manifesto

Strong rhythm, usually too broad and long for one person.

Scrolling should reveal the story; interaction should reward curiosity

Native scroll is the only required navigation.

The best motion pages remain understandable as plain text.
Pointer, tap, audio or drag expand what is already visible.

- ✓ Text is readable before motion ends
- ✓ Tap reveals optional proof
- ✓ Pointer perturbs locally
- ✓ Reduced motion preserves every beat
- ✓ No hover-only essential detail

Change the rhythm every one or two screens

00–20s

20–40s

40–60s

Statement

One decisive line, then a short trajectory.

Proof

Clients, specialties and one concrete example.

Personality

Side work, aspiration and a light ending.

The examples that most
directly
inform beck.fyi

Maria Vareva · structured biography

151 words

Present role → five selective turns → four beliefs → six values. Numbers create structure; links provide proof.

Borrow: selective trajectory and decision-led beliefs.

Avoid: asking text to carry every visual beat.

Hello, I'm Maria, currently I lead product design at [Hints](#), where I design for tools that reshape human-agent-software interaction.

Previously, I (1) led product design for Web at [Copilot Money](#), (2) worked on growth and user acquisition for cybersecurity SaaS at [Group-IB](#), (3) explored product ideas at Cornell Tech in collaboration with [Big Tech](#), (4) designed [TakeOFF](#), a fintech app, from 0 to 1, and (5) worked independently.

I believe in (1) strong ideas over strong opinions, (2) prototypes as the fast path to alignment, (3) relentless reduction of complexity, and (4) building strong foundations early.

I value (1) craft, (2) care, (3) intentionality, (4) clarity, (5) integrity, and (6) humanism.

Antoine Wodniack · kinetic restraint

220 words

A compressed career sentence sits inside a highly distinctive typographic and spatial system.

Borrow: one trajectory sentence and one governing geometry.

Avoid: using awards as the only proof.

Camila Rosa · identity, then proof

92 words

Two clear statements define the practice. Clients and achievement counts supply credibility without slowing the first read.

Borrow: expandable proof after a memorable visual.

Avoid: a client list that becomes wallpaper.

Giacomo Modica · personality with logic

226 words

Clients, influences, hobbies and side products form one causal story about the visual practice.

Borrow: purposeful taste labels and side-work reveals.

Avoid: copying the collage style rather than the logic.

Thibaud Fellay · one belief, one circle

205 words

Mountains, light and collaboration frame the practice; imagery and credits carry the proof.

Borrow: one authored belief plus restrained visual chapters.

Avoid: letting atmosphere replace concrete contribution.

conditions and *studio* environments, collaborating with *teams* to create *unique* worlds. His goal is to capture the *beauty* and essence of stories through *camera* and *lighting*.

VISION

My aim is to make the camera an integral part of the story, using light, framing, and movement to create a narrative presence. I focus on the human element, seeking to convey authentic emotions and establish enriching collaboration with my teams. My ambition is to create immersive and touching cinematic experiences that resonate deeply with the audience.

Thomas Monavon
by Lallé

Veronica Zubakova · quiet confidence

Playful voice

Self-aware questions, community projects and varied work make the page personal without becoming casual.

Borrow: personality through specific activity.

Avoid: scattering too many mini-stories.

Motion evidence · Antoine Wodniack

Scroll deforms one visual system while the biography stays concise.

Use: a single spatial grammar.

Avoid: content hidden until animation completes.

Motion evidence · Giacomo Modica

Tap and scroll reveal taste, personality and side work that already have meaning.

Use: interaction as evidence.

Avoid: mandatory novelty.

Existing ingredient · Spatial Scan

The parked lab already moves a flat-circle point cloud through loop, scroll and orbit camera modes.

Use: connective tissue between chapters.

Avoid: turning About into a 3D tour.

Typography tells the
story.

Dots carry the
transitions.

A living editorial profile: the working mind, not the résumé

Creative north star

A short factual story moves through one stable room. Typography carries meaning; the dot field reforms only when the next sentence gives it a job.

Type is the narrator

One dominant sentence per scene.

Dots are connective tissue

The same material reforms with meaning.

Artifacts are proof

Posters and experiments explain curiosity.

A one-minute reading path

- 01 0–8s · Position · one current professional thesis
- 02 8–20s · Trajectory · three selective turns plus clients
- 03 20–35s · Specialties · three outcome-led strengths
- 04 35–48s · Side work · two or three artifacts with a reason
- 05 48–56s · Next · one honest aspiration
- 06 56–60s · Exit · one optional light interaction

Keep the core story to 175–220 words

Budget

This is long enough to sound authored and short enough to read in roughly a minute. Deeper chronology and client detail can unfold on tap.

175–220

core

words

3

career

turns

2–3

side

artifacts

Be direct without sounding full of yourself

Tone equation

Confidence comes from clear decisions. Warmth comes from specificity and a little self-awareness.

Say this

“I turn ambiguous product problems into working systems teams can test.”

- Verb first
- Concrete object
- Observable consequence

Avoid this

“I deliver world-class, high-impact design across disciplines.”

- No superlatives
- No role stack
- No generic passion

One system, four behaviors

The rule

Scroll is the camera. Type controls pacing. Dots connect scenes. Tap and pointer only add local response.

Everything remains readable with reduced motion and without WebGL.

Scroll
primary

Moves the camera or reorganizes one field.

Type
meaning

Changes scale and density to mark chapters.

Dots
continuity

Resolve into depth, proof clusters and artifacts.

Touch
optional

Perturbs, unfolds or drags what is already visible.

Spatial Scan · narrator, not background

Existing ingredient

The parked lab already supports scroll, loop and orbit camera modes in the site's flat-circle language.

Use it to bridge chapters, reveal depth and frame artifacts.
Do not turn About into a 3D tour.

Five rules keep the page playful and purposeful

The story must work before the effects arrive.

These are the most common failure modes across the 40-site sample.

- ❌ No second portfolio grid
- ❌ No mandatory drag, audio or hover
- ❌ No dense client-logo wall
- ❌ No thin helper rings or lines
- ❌ One major mechanic before the ending

Concept 01 · Professional thesis

Hero

Large type does the positioning. A point-cloud corridor gives the line depth without adding another interface.

Concept 02 · Proof in the same room

Mid-scroll

Client names stay factual. Three artifacts interrupt the typography while the dot field reorganizes around them.

Concept 03 · Levity after credibility

Closing beat

Three personal artifacts and one draggable puck reward curiosity after the professional story is complete.

The next phase needs five small, honest inputs

Copy comes after the creative direction is agreed.

The research tells us the container. A short interview should fill it with verified material.

- ① One present-tense professional thesis
- ② Three trajectory turning points
- ③ Three specialties with examples
- ④ Two or three side artifacts and why
- ⑤ One aspiration and one human closing beat

Approve the system before writing the full page

Recommended sequence

Decide the narrative and interaction model first; then interview, draft, storyboard and prototype.

Approve now

Living editorial profile + 175–220-word core + scroll-led dot field.

- Narrative arc
- Interaction rules
- Concept tone

Defer until next phase

Final copy, exact artifacts and final simulation states.

- Interview
- Rights and assets
- Prototype testing
